DEVELOPMENT CHALLENGE

You're in the right place !

Welcome to ***sastranet*** ! Our recruitment process is designed to help us understand how you approach problems, learn new things, and contribute to a team. The first round is a hands-on Development Challenge where you'll work on an existing website and put your ideas into action.

ROUND 1	DURATION
Development Challenge	50–60 minutes

Round 1: Development Challenge (DC)

You'll receive an existing website and complete four tasks that move from identifying issues to improving the website's features and design. Focus on exploring the site carefully, understanding the code, and testing your changes.

TASK 1 – 10 mins	**Bug Finding** Explore the website and identify bugs or unexpected behaviour. Investigate carefully and note what you find.
TASK 2 – 15 mins	**Bug Fixing** Investigate and resolve an issue. AI tools may be used to help you understand the code and debug.
TASK 3 – 20 mins	**Feature Development** Add a new feature or enhance an existing one. Use your own ideas to make the website more useful.
TASK 4 – 10 mins	**Creative Redesign** Show your creativity by making the website more attractive, user-friendly, and visually engaging.

What to Keep in Mind

You don't need to know everything beforehand. We're interested in your approach, your problem-solving process, and how you turn ideas into working improvements. Make sure you test your changes in the browser.

How to Participate (During the DC Process)

01	Copy the GitHub repository URL shared by the team and clone it to your computer.
02	Open the project folder in Antigravity.
03	Use the Live Server extension to open the website in your browser.
04	Complete all four tasks within the given time. AI-agent assistance is allowed
05	Test your changes in the browser.

Sample Repository (For Practice Only)

Repository: https://github.com/sastranet-developers/simple-money

1. Clone the repository

Open a terminal and run:

git clone https://github.com/sastranet-developers/simple-money.git

cd simple-money

2. Run the website

Open the project folder in VS Code, install the Live Server extension, open index.html, and click “Go Live” in the bottom-right corner.

3. What the four tasks may look like

Task 1 — Bug Finding: Identify why the Travel filter does not show the Bus pass expense.

Task 2 — Bug Fixing: Fix the Add button so a new expense can be added.

Task 3 — Feature Development: Add a search box to find expenses by description.

Task 4 — Creative Redesign: Improve the expense cards, spacing, and button styling.

This is a public sample repository for reference. The actual challenge repository and instructions will be shared by the sastranet team.

Antigravity Setup (Recommended)

Please install **Google Antigravity** and sign in before the Development Challenge.

Default coding agents include **Gemini** and **Claude** (availability may vary). Students may also be eligible for additional Gemini model access and usage benefits through Google's student offers.

Set up your account beforehand so you can focus on the challenge!

https://antigravity.google/

NEED HELP? WE’RE ALWAYS HERE FOR YOU!

If you get stuck or have questions about the challenge, reach out. The team is always ready to help you out.
